

HOSPITAL MANAGEMENT SYSTEM

Front Desk + Admission Reporting Complete Guide

Version 7.5 - Reconstructed Implementation Edition

Hospital: CH Sharif and Saeed Hospital

Prepared for implementation by: iSysware Software Solutions

Scope: Front Desk / Billing Portal + Admission Portal reporting, cross-portal finance, Pharmacy request visibility, discharge controls and export standards

Reconstruction Note

This edition recreates the previously generated Front Desk + Admission reporting guide using the Hospital project's saved Front Desk/Billing workflow, Admission workflow, final functional/technical blueprint and reporting standards. The exact prior generated v7.5 PDF file was not available, so this is a faithful implementation-grade reconstruction rather than a byte-for-byte copy.

Critical Portal Rule

Front Desk/Billing is the Hospital cash collection owner. Admission never collects Hospital cash/card/online payments. Admission creates and maintains the inpatient charge stream, sends payment requests to Front Desk/Billing, and receives read-only payment/clearance status. Hospital Bill and Pharmacy Bill remain separate financial streams.

Document Map

Section	Coverage
1	Reporting architecture and cross-portal ownership
2	Universal report UI, filters, exports and attribution
3	Front Desk/Billing - dashboard and daily summary
4	Front Desk/Billing - encounters, billing, collection, ledger and settlement reports
5	Front Desk/Billing - panel, department, discounts, refunds and outstanding
6	Admission - census, admission register, beds, transfers and length of stay
7	Admission - running bill, interim statement and Hospital payment status
8	Admission - Pharmacy requests, fulfillment, high-value medicine and clearance
9	Admission - discharge, service consumption and outstanding
10	Cross-portal formulas, reconciliations and implementation flows
11	QA / acceptance checklist for reporting

Source Alignment

The reconstructed guide preserves these project rules: temporary Self-Pay identities are transaction-specific; Panel Patients reference the saved Panel Patient master; active Admission payments are collected only by Billing; settlement belongs to cash-handling users; every action/report must retain actual user attribution; PDF/Excel/Print must respect active filters.

1. Reporting Architecture & Ownership

The reporting layer must mirror the operational ownership of the HMS. A report must never imply that a portal performed an action it only viewed or requested.

Area	System of Record / Owner	Reporting Behaviour
Reception / Encounter	Front Desk/Billing	Front Desk creates/handles visit identity and department routing; report by visit/department/user.
Hospital Invoice / Charges	HMS Billing	Hospital bill includes hospital-side services, room/bed, procedures and diagnostics.
Hospital Payment Collection	Front Desk/Billing only	All full/partial Hospital payments, including active Admission payments and final Hospital Bill clearance, show actual Collected By user.
Admission Case	Admission	Admission No, patient display identity, doctor, department, ward/room/bed, stay status and discharge lifecycle.
Bed Allocation / Transfer	Admission	Every allocation has start/end time; one bed cannot have more than one active allocation.
Pharmacy Medicine Request	Admission -> Pharmacy	Admission reports request and returned fulfillment/clearance status; detailed Pharmacy cashier ledger remains Pharmacy-owned.
Pharmacy Bill	Standalone Pharmacy	Separate from Hospital Bill; do not merge into a single paid flag.
Cashier Balance / Settlement	Front Desk/Billing user	Opening float, collections, expenses/refunds, expected cash, physical cash, variance, settled and remaining.
Discharge	Admission	Requires Clinical Ready + Hospital financial clearance + Pharmacy clearance, except authorized credit/panel override.

Audit Attribution

Use actor-specific fields rather than a generic User column: **Created By, Collected By, Approved By, Refunded By, Settled By, Changed By, Requested By, Dispensed By**. Approval actor is stored separately from the performer. Include timestamp and source portal/module.

2. Universal Report Controls, Filters & Export Standard

Every list/report page follows the same reporting shell so users do not have to relearn controls between Front Desk and Admission.

Universal controls

- Search + server-side filters + sorting + pagination.
- From Date and To Date on every transactional report; quick presets: Today, Yesterday, This Week, This Month, Previous Month, Custom.
- Role-aware columns and actions; users only see data allowed by their scope.
- Column chooser where practical; exported columns should match report intent and permissions.
- Export PDF, Export Excel and Print use the currently applied filters unless export scope is explicitly changed.
- Large exports may be generated as background jobs and retained in Export History with requested_by, generated_at, status, row count and download/expiry status.

Standard export header/footer

Area	Required Content
Header	Hospital logo + Hospital name + Report title.
Filter block	Date range + all applied filters + scope/portal when relevant.
Body	KPIs/summary totals plus report table; charts optional and must reconcile with table totals.
Footer	Generated By actual logged-in user + generated timestamp + page X of Y.
Excel	Clean typed columns, no merged cells in data sheet; filter/metadata summary in a separate sheet or top metadata area.
Print	Same active filter scope; readable pagination and totals.

Common filters by domain

Domain	Common Filters
Front Desk	Cashier/User, Counter/Shift, Department, Visit Type, Panel/Self-Pay, Payment Status, Payment Method, Invoice/Receipt Status.
Admission	Admission No, Department, Doctor, Ward, Room/Bed, Panel/Self-Pay, Admission Status, Discharge Status, Referral Source.
Finance	Payment Method, Collected By, Receipt Status, Amount range, Outstanding status, Discount/Refund/Voided state.
Pharmacy-linked	Request Status, Fulfillment Status, Medicine, Pharmacy invoice/clearance status, high-value approval status.

3. Front Desk / Billing Reporting

Scope

This portal covers reception, temporary Self-Pay cases, Panel Patient lookup, service billing, receipts, all Hospital payment collection, active Admission partial payments, final Admission Hospital Bill clearance, cashier balance sheet and settlement.

3.1 Front Desk Daily Summary / Dashboard Report

Operational and financial snapshot for the selected day/shift/user scope.

Top KPIs / Summary Cards

- Patients/visits handled today
- OPD / Observation / Emergency encounter counts
- Gross billed, discount, net billed
- Cash / Card-POS / Online-Bank collections
- Partial/unpaid invoice count and amount
- Admission Hospital payments collected
- Refund/void attention count
- Expected cash vs physical/settled where shift is closed

Filters

- Date / quick preset
- Cashier/User
- Counter/Shift
- Department
- Visit Type
- Panel/Self-Pay

Core Table / Export Columns

- Metric
- Count
- Amount
- Cashier/Scope
- Comparison/Status

Rules / Behaviour

- Dashboard figures must drill down to their source report with the same filters.
- Do not count online/card as physical cash.

3.2 Appointment / Visit / Encounter Register

Chronological patient-facing register for planned/arrived visits and actual OPD/OBS/ER encounters.

Top KPIs / Summary Cards

- Total visits
- Completed encounters
- Waiting/active
- Cancelled/no-show where appointment flow is used

Filters

- From/To

- Department
- Doctor/RMO
- Visit Type
- Status
- Panel/Self-Pay
- Created By

Core Table / Export Columns

- Visit/Encounter No
- Date/Time
- Patient display identity
- Panel/Self-Pay
- Department
- Doctor/RMO
- Queue/Status
- Created By

Rules / Behaviour

- Temporary Self-Pay identities remain transaction-specific; reporting should not imply a reusable permanent patient master.
- Panel Patients can reference saved member/card details subject to permission.

3.3 Billing / Invoice Register

Primary billing report for all Hospital-side invoices raised by Front Desk/Billing, including visit billing and Admission Hospital bills.

Top KPIs / Summary Cards

- Gross Billed
- Discount
- Net Billed
- Paid
- Outstanding
- Invoice Count

Filters

- From/To
- Cashier/User
- Department
- Visit Type
- Payer
- Panel
- Payment Status
- Invoice Status

Core Table / Export Columns

- Invoice No
- Patient/MR or display identity
- Source/Visit Type

- Department
- Gross
- Discount
- Net
- Paid
- Balance
- Created By
- Status

Rules / Behaviour

- Invoice totals are server-calculated; do not trust client-side totals.
- Rate snapshots must remain historically stable after rate changes.

Formula / Calculation Notes

- $\text{Net Billed} = \text{Gross Billed} - \text{Approved Discount}$
- $\text{Outstanding} = \text{Net Billed} - \text{Valid Payments} + \text{Valid Refund/Reversal effect}$

3.4 Collection & Receipt Report

Cashier/user-wise collection report across Hospital receipts, including active Admission partial payments and final Admission clearance payments.

Top KPIs / Summary Cards

- Total collected
- Cash
- Card/POS
- Online/Bank
- Receipt count
- Refunded amount

Filters

- From/To
- Cashier
- Counter/Shift
- Payment Method
- Invoice/Receipt Status
- Department
- Admission vs Visit source

Core Table / Export Columns

- Receipt No
- Invoice/Admission No
- Patient display identity
- Amount
- Method
- Date/Time
- Collected By
- Counter/Shift

- Status

Rules / Behaviour

- Every receipt must show actual Collected By Billing user.
- Receipt reprints are logged; void/refund requires permission and reason.

3.5 Patient / Invoice Ledger

A transaction-level ledger showing bill creation, subsequent service additions, payments, refunds/adjustments and running balance.

Top KPIs / Summary Cards

- Opening balance where applicable
- Charges
- Payments
- Refunds/adjustments
- Closing balance

Filters

- Patient/MR/display identity
- Invoice No
- Admission No if linked
- Date range
- Transaction Type
- User

Core Table / Export Columns

- Date/Time
- Reference No
- Transaction Type
- Description
- Debit/Charge
- Credit/Payment
- Running Balance
- Performed By

Rules / Behaviour

- Ledger must be append/reversal based; no silent historical invoice rewriting.
- Admission-linked Hospital payments must reconcile to Front Desk receipts.

3.6 Admission Hospital Payment Collection Report

Dedicated view of Hospital payments collected by Front Desk for active or discharge-stage admissions.

Top KPIs / Summary Cards

- Requested amount
- Collected amount
- Remaining Hospital due
- Receipt count
- Admissions cleared

Filters

- From/To
- Admission No
- Billing Collector
- Payment Method

- Status
- Panel/Self-Pay
- Department

Core Table / Export Columns

- Admission No
- Patient
- Current Hospital Due
- Requested Amount
- Collected Amount
- Receipt No
- Method
- Collected By
- Remaining Hospital Due
- Clearance Status

Rules / Behaviour

- Admission does not collect these payments; its view is a read-only sync from Billing.
- Final Hospital clearance must include all previous Billing-collected partial payments.

3.7 Cashier Balance Sheet Report

Personal shift/day/custom cash position for cash-handling Front Desk/Billing users.

Top KPIs / Summary Cards

- Opening/Petty Cash
- Cash Collections
- Cash Expenses
- Cash Refunds
- Expected Cash
- Physical Cash
- Variance
- Settlement Amount
- Remaining Cash

Filters

- Shift / Day / Custom
- Cashier
- Counter
- Settlement Status

Core Table / Export Columns

- Opening Float
- Cash Collections
- Expenses
- Refunds
- Previous Deposits

- Expected Cash
- Physical Cash
- Variance
- Settlement Amount
- Remaining Cash
- Status

Rules / Behaviour

- Online/Card is reported separately and is not part of physical cash.
- Variance reason is mandatory when variance is non-zero.

Formula / Calculation Notes

- $\text{Expected Cash} = \text{Opening Float} + \text{Cash Collections} + \text{allowed carry} - \text{Cash Expenses} - \text{Cash Refunds} - \text{previous cash deposits}$
- $\text{Variance} = \text{Physical Cash} - \text{Expected Cash}$
- $\text{Remaining Cash} = \text{Physical Cash} - \text{Accepted/Settled Cash}$ (subject to approved retained float/carry rules)

3.8 Account Settlement Report

Tracks cash handover submitted by cashier to Admin/Super Admin and management acceptance/return/rejection.

Top KPIs / Summary Cards

- Pending settlements
- Accepted amount
- Partial acceptance
- Returned/rejected
- Remaining cashier cash

Filters

- From/To
- Cashier
- Shift/Day
- Settlement Status
- Reviewed By

Core Table / Export Columns

- Settlement Ref
- Cashier
- Period
- Expected Cash
- Physical Cash
- Variance
- Submitted Amount
- Accepted Amount
- Remaining Cash
- Submitted At
- Reviewed By
- Status

Rules / Behaviour

- Accepted settlements cannot be silently deleted; corrections use controlled adjustment/reversal.
- Front Desk cashier sees updated status and remaining balance after management action.

4. Front Desk Exception & Management Reports

4.1 Outstanding / Partial Invoice Report

Open receivable list for follow-up and management control.

Top KPIs / Summary Cards

- Outstanding amount
- Partial invoice count
- Unpaid invoice count
- Aging buckets where enabled

Filters

- From/To
- Department
- Visit Type
- Panel/Self-Pay
- Invoice Status
- User
- Outstanding range

Core Table / Export Columns

- Invoice No
- Patient
- Department
- Net
- Paid
- Outstanding
- Last Payment Date
- Created By
- Status

Rules / Behaviour

- Do not mark an invoice fully paid until valid payments cover the net amount after approved adjustments.

4.2 Discount / Panel Discount Report

Shows manual discounts, configured Panel discounts and override history.

Top KPIs / Summary Cards

- Gross before discount
- Discount amount
- Net after discount
- Manual vs Panel discount split

Filters

- From/To
- Department
- Panel
- Discount Type

- Approved By
- User

Core Table / Export Columns

- Invoice No
- Patient/Panel
- Service/Invoice
- Standard Amount
- Discount Type
- Discount Amount
- Net
- Applied By
- Approved By
- Reason

Rules / Behaviour

- Discounts above configured limits require approval; Applied By and Approved By must remain distinct when approval is required.

4.3 Refund / Void / Reversal Report

Exception report for controlled financial reversals.

Top KPIs / Summary Cards

- Refund amount
- Void count
- Reversal count
- Pending approval count

Filters

- From/To
- Cashier/User
- Transaction Type
- Status
- Approved By
- Department

Core Table / Export Columns

- Reference
- Original Invoice/Receipt
- Type
- Amount
- Reason
- Requested/Performed By
- Approved By
- Date/Time
- Status

Rules / Behaviour

- No silent invoice rewriting; preserve original transaction plus compensating/refund/reversal entry.

4.4 Department / Service Revenue Report

Summarizes billing and collections by department/service while preserving source transactions.

Top KPIs / Summary Cards

- Gross
- Discount
- Net
- Collected
- Outstanding
- Service count

Filters

- From/To
- Department
- Service
- Visit Type
- Panel
- Payment Status

Core Table / Export Columns

- Department
- Service
- Qty/Count
- Gross
- Discount
- Net
- Collected
- Outstanding

Rules / Behaviour

- Report totals must reconcile to filtered invoice lines and valid payment allocations.

5. Admission Reporting

Scope

Admission owns the inpatient case lifecycle: authorized admission, department/ward/room/bed assignment, transfers, hospital charge capture, medicine requests to Pharmacy, payment requests to Billing, and discharge clearance. Admission has no cashier Balance Sheet or Hospital Account Settlement.

5.1 Admission Daily Summary / Inpatient Dashboard

Daily operational snapshot of inpatient activity and discharge readiness.

Top KPIs / Summary Cards

- Admissions today
- Active admissions
- Pending admissions
- Discharges today
- Pending discharge clearance
- Beds occupied / available
- Average length of stay
- Outstanding inpatient Hospital balances

Filters

- Date / quick preset
- Department
- Ward
- Doctor
- Panel/Self-Pay
- Admission Status

Core Table / Export Columns

- Metric
- Count/Amount
- Department/Ward
- Attention Status

Rules / Behaviour

- Bed figures must be based on active bed allocations, not manually typed counters.

5.2 Admission Register

Master transactional report of admissions and discharge status.

Top KPIs / Summary Cards

- Admissions count
- Active
- Discharged
- Panel vs Self-Pay
- Current Hospital outstanding

Filters

- From/To

- Department
- Doctor
- Ward
- Room/Bed
- Panel/Self-Pay
- Admission Status
- Discharge Status
- Referral Source

Core Table / Export Columns

- Admission No
- Patient display identity
- Panel/Self-Pay
- Referral Source
- Doctor
- Department
- Ward/Room/Bed
- Admit Date/Time
- Discharge Date/Time
- Status
- Created By

Rules / Behaviour

- Admission requires valid referral/recommendation according to configured workflow.
- Self-Pay admission identity remains temporary; Panel Patients reference saved Panel Patient master.

5.3 Inpatient Census Report

Point-in-time census for active inpatients, with ward/bed and financial attention indicators.

Top KPIs / Summary Cards

- Active census
- Occupied beds
- Available beds
- Pending discharge
- Hospital due
- Pharmacy due status

Filters

- As-of Date/Time
- Department
- Ward
- Room/Bed
- Doctor
- Panel/Self-Pay
- Clearance Status

Core Table / Export Columns

- Admission No
- Patient
- Doctor
- Department
- Ward
- Room
- Bed
- Admit Date/Time
- LOS
- Hospital Due
- Pharmacy Clearance
- Discharge Readiness

Rules / Behaviour

- Census is a snapshot report; filter/as-of timestamp must be printed on export.

5.4 Bed Occupancy / Ward Utilization Report

Measures occupancy and availability by ward/room/bed over the selected period.

Top KPIs / Summary Cards

- Beds occupied
- Beds available
- Occupancy rate
- Bed-days used
- Peak occupancy

Filters

- From/To
- Department
- Ward
- Room Type
- Bed Status

Core Table / Export Columns

- Ward
- Room/Bed
- Capacity
- Occupied Time/Bed-days
- Available Time
- Occupancy %
- Current Patient/Admission where permitted

Rules / Behaviour

- One bed can have only one active allocation.
- Transfers close previous allocation timestamp and open a new allocation.

Formula / Calculation Notes

- Occupancy % = Occupied bed-time / Available bed-time x 100

5.5 Bed / Ward / Room Transfer History

Complete movement history for inpatient location changes.

Top KPIs / Summary Cards

- Transfer count
- Same-ward transfers
- Cross-ward transfers

Filters

- From/To
- Admission No
- Department
- From Ward
- To Ward
- Changed By

Core Table / Export Columns

- Admission No
- Patient
- From Dept/Ward/Room/Bed
- To Dept/Ward/Room/Bed
- Transfer Date/Time
- Reason
- Changed By

Rules / Behaviour

- Previous allocation must be closed before the new allocation becomes active.
- Transfer history is immutable/audited; no overwrite of prior location.

5.6 Length of Stay Report

Measures inpatient duration for active and discharged cases.

Top KPIs / Summary Cards

- Average LOS
- Median LOS where implemented
- Longest current stay
- Discharged LOS

Filters

- From/To
- Department
- Ward
- Doctor
- Admission/Discharge Status
- Panel/Self-Pay

Core Table / Export Columns

- Admission No

- Patient
- Department/Ward
- Admit Date/Time
- Discharge Date/Time
- LOS
- Status

Formula / Calculation Notes

- Discharged LOS = Discharge Date/Time - Admit Date/Time
- Active LOS = Report As-of Date/Time - Admit Date/Time

5.7 Running Hospital Bill / Interim Statement

Patient-facing or internal statement of hospital-side inpatient charges only, excluding the standalone Pharmacy Bill.

Top KPIs / Summary Cards

- Hospital subtotal
- Discount
- Hospital payments received by Billing
- Hospital outstanding

Filters

- Admission No
- Statement Date
- Charge Type
- Department/Service
- Date range

Core Table / Export Columns

- Date/Time
- Charge Ref
- Category
- Service/Room/Procedure
- Qty/Days
- Rate
- Gross
- Discount
- Net
- Billing Receipt Allocation
- Running Hospital Balance

Rules / Behaviour

- Hospital Bill contains bed/room, services, procedures, diagnostics and other hospital-side charges.
- Pharmacy Bill is not merged into Hospital Bill.
- Room/bed rates are snapshotted for each billing period.

Formula / Calculation Notes

- Hospital Outstanding = Hospital Net Charges - Valid Billing-collected Hospital Payments

5.8 Hospital Payment Request & Status Report

Tracks payment requests sent by Admission to Front Desk/Billing and the receipts/status returned by Billing.

Top KPIs / Summary Cards

- Requests raised
- Requested amount
- Collected amount
- Open requests
- Hospital outstanding

Filters

- From/To
- Admission No
- Request Status
- Billing Collector
- Payment Method
- Department

Core Table / Export Columns

- Request Ref
- Admission No
- Patient
- Requested Amount
- Request Date/Time
- Requested By
- Receipt No
- Collected Amount
- Method
- Collected By
- Remaining Hospital Due
- Status

Rules / Behaviour

- Admission view is read-only for payment receipts.
- Billing is the source of truth for Hospital payment collection.

5.9 Pharmacy Medicine Request Report

Admission-facing report of medicines requested for inpatients and the fulfillment status returned by Pharmacy.

Top KPIs / Summary Cards

- Requests
- Requested qty
- Dispensed qty
- Pending
- Partial
- Rejected
- Fulfilled

Filters

- From/To
- Admission No
- Medicine
- Request Status
- Urgency
- Requester
- Pharmacy Clearance

Core Table / Export Columns

- Request Ref
- Admission No
- Patient
- Medicine
- Requested Qty
- Urgency
- Requested By
- Request Date/Time
- Accepted/Rejected
- Dispensed Qty
- Pharmacy Invoice Ref
- Pharmacy Clearance

Rules / Behaviour

- Admission reports only request/response and linked summary data; detailed Pharmacy stock/cash ledger remains Pharmacy-owned.

5.10 Medicine Request Fulfillment Report

Compares requested medicine quantities with actual Pharmacy fulfillment.

Top KPIs / Summary Cards

- Requested qty
- Dispensed qty
- Unfulfilled qty

- Fulfillment %
- Partial request count

Filters

- From/To
- Medicine
- Admission No
- Department
- Status
- Pharmacy user where visible

Core Table / Export Columns

- Request Ref
- Medicine
- Requested Qty
- Dispensed Qty
- Unfulfilled Qty
- Fulfillment %
- Status
- Dispense Date/Time

Formula / Calculation Notes

- Unfulfilled Qty = Requested Qty - Dispensed Qty
- Fulfillment % = Dispensed Qty / Requested Qty x 100 (for Requested Qty > 0)

5.11 High-Value Medicine Approval Visibility

Admission-side visibility for linked Pharmacy requests that require configured high-value approval before dispense.

Top KPIs / Summary Cards

- Approval pending
- Approved
- Rejected
- High-value requested amount

Filters

- From/To
- Admission No
- Medicine
- Approval Status
- Requester

Core Table / Export Columns

- Request Ref
- Admission No
- Medicine
- Estimated/Charge Amount
- Approval Required

- Approval Status
- Approved By
- Approval Date/Time
- Dispense Status

Rules / Behaviour

- High-value threshold is configurable; historical project blueprint mentioned PKR 5,000 as a source-sketch example, not a hard-coded rule.
- Approval actor must be separate from requester/dispensing actor.

5.12 Pharmacy Clearance Status Report

Read-only Admission view of linked Pharmacy financial/fulfillment clearance required for discharge.

Top KPIs / Summary Cards

- Cleared
- Outstanding
- Approved credit
- Pending

Filters

- From/To
- Admission No
- Department
- Clearance Status

Core Table / Export Columns

- Admission No
- Patient
- Pharmacy Invoice Ref
- Pharmacy Charge Summary
- Pharmacy Due/Status
- Clearance Status
- Updated At
- Pharmacy Actor where provided

Rules / Behaviour

- Hospital and Pharmacy clearance are separate states and must never collapse into one generic Paid flag.

5.13 Discharge Clearance Report

Operational queue and audit report for final discharge readiness.

Top KPIs / Summary Cards

- Clinical ready
- Hospital cleared
- Pharmacy cleared
- Fully discharge-ready
- Blocked/pending

Filters

- From/To
- Department
- Ward
- Doctor
- Clinical Status
- Hospital Clearance
- Pharmacy Clearance
- Discharge Status

Core Table / Export Columns

- Admission No
- Patient
- Doctor
- Clinical Ready
- Hospital Clearance
- Hospital Due
- Pharmacy Clearance
- Discharge Ready
- Override/Credit Status
- Completed By
- Discharge Date/Time

Rules / Behaviour

- Default final discharge requires Clinical Ready = YES + Hospital financial clearance + Pharmacy financial clearance.
- Authorized Panel/Credit override may permit discharge where policy allows, while outstanding balances remain recorded.
- Bed is released only when the admission is actually closed/discharged.

5.14 Admission Service Consumption Report

Department/ward/service analysis of hospital-side inpatient resource and service consumption.

Top KPIs / Summary Cards

- Service count/qty
- Gross charges
- Net charges
- Top services

- Ward/department consumption

Filters

- From/To
- Department
- Ward
- Service Category
- Service
- Doctor
- Panel/Self-Pay

Core Table / Export Columns

- Department/Ward
- Service
- Qty
- Rate basis
- Gross
- Discount
- Net
- Admission Count

Rules / Behaviour

- Must reconcile to running Hospital Bill charge lines, not Pharmacy medicine invoice lines.

5.15 Inpatient Outstanding Balance Report

Management list of active/discharged admissions with Hospital balances still outstanding.

Top KPIs / Summary Cards

- Total Hospital outstanding
- Active outstanding
- Discharged outstanding
- Approved credit outstanding

Filters

- From/To
- Department
- Ward
- Panel/Self-Pay
- Admission Status
- Clearance Status
- Outstanding range

Core Table / Export Columns

- Admission No
- Patient
- Hospital Net
- Hospital Paid

- Hospital Outstanding
- Last Billing Receipt
- Clearance/Credit Status
- Discharge Status

Rules / Behaviour

- Do not include standalone Pharmacy due in the Hospital Outstanding total; show it separately when needed.

6. Cross-Portal Financial & Operational Flow

The reports must reconcile because they are reading the same posted source transactions, even though the portals have different permissions and ownership.

Step	Admission	Front Desk / Billing	Report Impact
1	Creates/opens admission case and hospital charge stream.	-	Admission Register / Running Bill.
2	Raises Hospital payment request with Admission No and current due.	Receives request.	Payment Request Report.
3	Read-only waiting state.	Collects full/partial Hospital payment and issues receipt.	Collection Report + Admission Payment Status.
4	Receives synced receipt, amount, method, Collected By, remaining due.	Hospital outstanding decreases.	Running Bill / Ledger reconcile to Billing receipt.
5	At discharge, freezes/reviews Hospital charge stream and sends final Hospital Bill.	Verifies prior partial payments and collects remaining due or applies authorized credit/panel rule.	Final Hospital clearance.
6	Waits for Hospital and Pharmacy clearances.	Returns Hospital clearance.	Discharge Clearance Report.
7	Closes admission and releases bed after required clearances.	-	Discharge + Bed Occupancy/Census.

Key formulas and reconciliation rules

Metric	Formula / Rule
Net Billed	Gross Billed - approved discounts.
Hospital Outstanding	Hospital Net Charges - valid Hospital payments collected by Billing, adjusted for valid reversals/refunds.
Expected Cash	Opening Float + Cash Collections + allowed carry - Cash Expenses - Cash Refunds - previous cash deposits.
Variance	Physical Cash - Expected Cash.
Occupancy %	Occupied bed-time / available bed-time x 100.
Length of Stay	Discharge time - admit time; for active cases use report as-of time.
Medicine Fulfillment %	Dispensed Qty / Requested Qty x 100.
Clearance	Clinical, Hospital and Pharmacy are independent statuses; do not derive a single financial paid flag across Hospital + Pharmacy.

7. Report Page Implementation Pattern

Recommended page composition for every report.

Zone	Recommended Content
A. Title bar	Report name, portal, Export PDF / Excel / Print.
B. Filter bar	Date range + report-specific filters + Search + Reset.
C. KPI strip	4-8 reconciled summary cards for the current filter set.
D. Main table	Server-side pagination/sort, role-aware columns, sticky header where practical.
E. Totals footer	Filtered totals for finance/quantity reports.
F. Detail drawer	Open source transaction/admission/receipt without losing report filters.
G. Audit metadata	Generated By/At on export; source actor fields inside table.

Filter Persistence

When the user opens a row and returns to the report, preserve the date range, filters, sort and page whenever practical. Export must use the same active scope shown on screen.

Calculation Transparency

Financial cards and totals should be explainable by drilling into the filtered transaction rows. Avoid dashboard-only numbers that cannot reconcile to a ledger/report.

8. Reporting QA / Acceptance Checklist

Use this checklist during implementation and UAT.

#	Acceptance Check	Pass Criteria
1	Date filtering	From/To and presets return the same rows/totals in UI, PDF and Excel.
2	User attribution	Collected By / Created By / Approved By / Changed By show the actual actor, not a generic Admin/Super Admin label.
3	Admission payment ownership	No Hospital cash/card/online payment can be recorded from Admission portal.
4	Admission payment sync	Billing receipt appears in Admission payment history with receipt no, amount, method, time, collector and updated due.
5	Two-bill separation	Hospital Bill and Pharmacy Bill are never merged into one paid/cleared field.
6	Discharge rule	Normal discharge blocks until clinical + Hospital + Pharmacy requirements are satisfied or a permitted override is recorded.
7	Bed integrity	A bed cannot have two active allocations; transfer closes old allocation before new allocation.
8	Running balance	Invoice/admission ledger balance matches source charges, receipts, refunds and reversals.
9	Settlement math	Expected Cash, Physical Cash, Variance, Settled and Remaining match source cash transactions.
10	Online/card handling	Online/Card totals are visible but excluded from physical cash expected amount.
11	Refund/void audit	Original transaction remains; reason + performer + approver + time are retained.
12	Panel rules	Panel discounts and overrides show source rule plus actor/approval where relevant.
13	Pharmacy request lifecycle	Pending/Accepted/Partial/Rejected/Fulfilled quantities reconcile to Pharmacy response.
14	High-value approval	Threshold is configurable and approval status/actor is auditable.
15	Export identity	Hospital name/logo, report title, filters, generated-by, generated-at and page numbering appear on PDF.
16	Excel quality	Dates/numbers are typed; data sheet has no merged cells; filter summary is preserved.
17	Role scope	A user cannot export rows or columns they cannot view in the UI.
18	Large export history	Background export shows requester, report, filters, status, row count and generated time.
19	Census correctness	As-of inpatient census matches active admissions/bed allocations at that timestamp.
20	Reconciliation	Dashboard KPI -> report total -> transaction ledger all reconcile for the same filter set.

9. Final Recommended Report Menu

A practical navigation tree for the two portals.

Front Desk / Billing Reports	Admission Reports
Daily Summary	Daily Inpatient Summary
Appointments / Visit / Encounter Register	Admission Register
Billing / Invoice Register	Inpatient Census
Collection & Receipt Report	Bed Occupancy / Ward Utilization
Patient / Invoice Ledger	Bed / Ward / Room Transfer History
Admission Hospital Payment Collections	Length of Stay
Cashier Balance Sheet	Running Hospital Bill / Interim Statement
Account Settlement	Hospital Payment Request & Status
Outstanding / Partial Invoices	Pharmacy Medicine Requests
Discount / Panel Discount	Medicine Fulfillment
Refund / Void / Reversal	High-Value Medicine Approval Visibility
Department / Service Revenue	Pharmacy Clearance Status
Panel / Payer Reporting	Discharge Clearance
Receipt Reprint / Exception Log	Admission Service Consumption
User/Cashier Performance	Inpatient Outstanding Balance

Implementation Baseline

This reconstructed v7.5 guide should be treated as the reporting specification for Front Desk/Billing + Admission unless a later signed client requirement changes a rule. In particular, preserve Billing-only Hospital cash collection, separate Hospital/Pharmacy financial streams, actor-specific audit fields, active-filter exports, and transaction-based reconciliation.
