

## CH SHARIF AND SAEED HOSPITAL

# Hospital Management System + Standalone Pharmacy

Complete Functional, Financial, Workforce, Inventory and Integration Blueprint

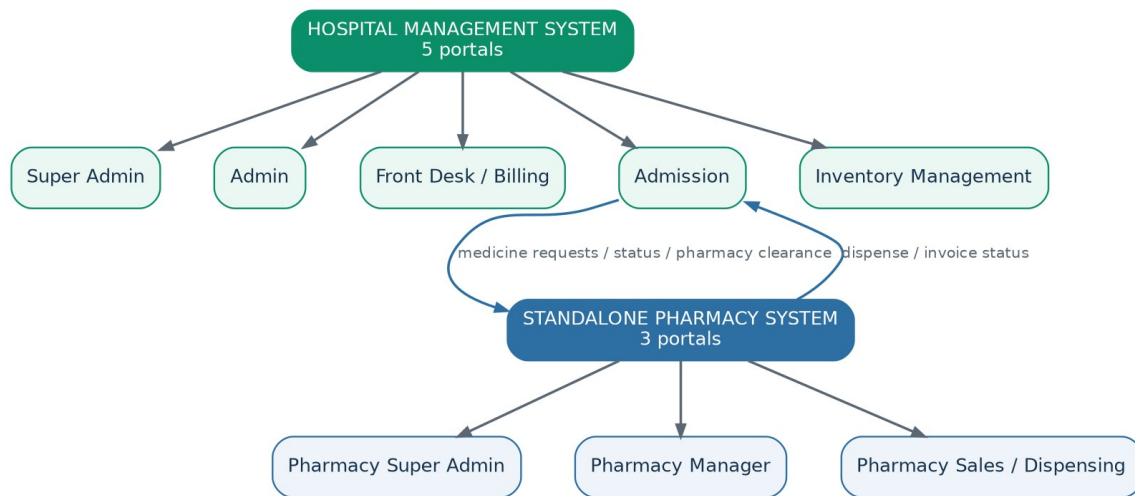

**Master document: every portal, ownership rule, cross-flow and future extension.**

Prepared by iSysware Software Solutions | Final Source of Truth v6.3

## 1. Final system map

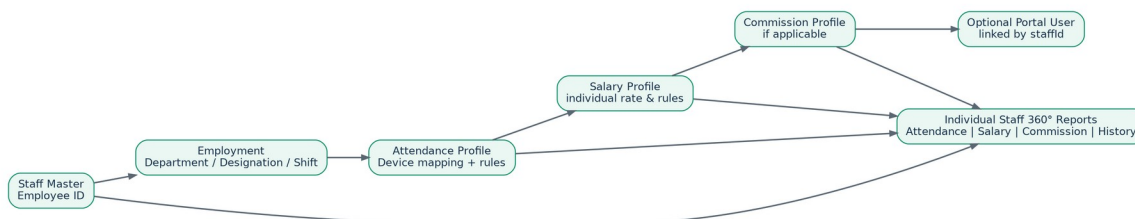

| Area                 | Role                                                                                                         | Key rule                                                                                              |
|----------------------|--------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| Super Admin          | Full hospital governance, workforce, finance, reports and settlement control                                 | Same normal operational scope as Admin; protected root-account safeguards                             |
| Admin                | Same normal hospital-management functions as Super Admin                                                     | Cannot create/delete/deactivate/demote/change credentials or access of protected Super Admin accounts |
| Front Desk / Billing | Appointments, OPD/Observation/Emergency intake, Hospital invoices, all Hospital payment collection           | Cash-handling; each cashier has own Balance Sheet + Account Settlement                                |
| Admission            | Planned/direct admission, bed/stay/services, medicine-mode coordination, discharge clearances                | Non-cash portal; sends payment requests to Billing                                                    |
| Inventory Management | General/non-medicine stock, procurement, supplier/stock ledgers, issues/transfers, petty cash and settlement | Cash-handling when funded; own Balance Sheet + Account Settlement                                     |
| Standalone Pharmacy  | Medicine inventory, batches/expiry, dispensing, Pharmacy billing and Pharmacy cash control                   | Separate project with Pharmacy Super Admin, Manager and Sales/Dispensing Staff                        |

Five HMS portals plus a separate three-portal Pharmacy project.

## 2. Staff Master, Portal Users and Staff 360° Profile

Staff and system users are separate identities. Staff Master is the permanent employee/HR identity. Portal User is only login/access. A staff record may exist without a login; a portal account that belongs to an employee links to the same staffid.

Staff record is the center of employment, attendance, salary, commission and optional portal access.

| Staff Profile area | What must be visible to Super Admin/Admin                                     |
|--------------------|-------------------------------------------------------------------------------|
| Overview           | Employee ID, category, department, designation, contact, status, joining date |

| Staff Profile area  | What must be visible to Super Admin/Admin                                                              |
|---------------------|--------------------------------------------------------------------------------------------------------|
| Employment/Shift    | Current and historical department/designation/shift assignments and effective dates                    |
| Attendance          | Daily/period attendance, device mapping, late/early/absence, corrections and reasons                   |
| Salary              | Staff-specific salary profile, generated salaries, calculation breakdown, paid/partial/outstanding     |
| Commission          | If applicable: service rules, accrual, generated statements, paid/partial/outstanding                  |
| Portal Access       | Linked portal username/status or No Portal Access                                                      |
| Future Staff Portal | Same staffid can later expose only the employee's own attendance, salary slips, commission and profile |

**Salary and Commission are not global employee amounts in Hospital Setup. Setup stores shared types/templates only. Actual salary rate, deduction rules and doctor service-commission rules are assigned per Staff profile during Add/Edit Staff.**

### 3. Attendance, Salary and Commission

*Device punches are normalized and approved before Salary generation.*

- 24/7 shifts support overnight duty and department-wise schedules.
- Super Admin/Admin can correct attendance, but original value, corrected value, reason, actor and timestamp are preserved.
- Salary is generated independently: Per Day, Monthly or Custom Date Range; payment can be Full, Partial or Later.
- Doctor Commission is a separate stream based on actual completed services; generation/payment is independent of Salary.

*Doctor Commission: completed services -> staff-specific commission rules -> generation -> independent payment.*

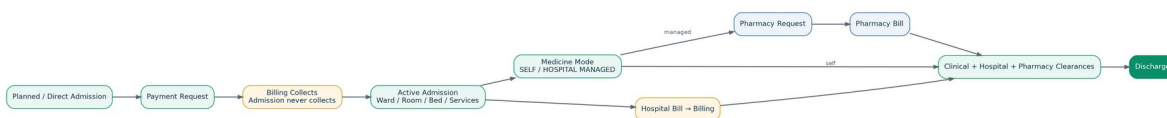

### 4. Front Desk / Billing

*Front Desk owns appointments, Hospital invoicing, all Hospital collections and cashier settlement.*

- Appointment Booking supports normal/self-pay temporary identity or permanent Panel Patient, department, doctor, slot, service, advance and payment status.
- OPD, Observation and Emergency are encounter/workflow types; they do not require separate portals.
- Admission partial/final Hospital payments are also received only by Front Desk/Billing.
- Each Billing user has a separate Balance Sheet and submits their own Account Settlement.

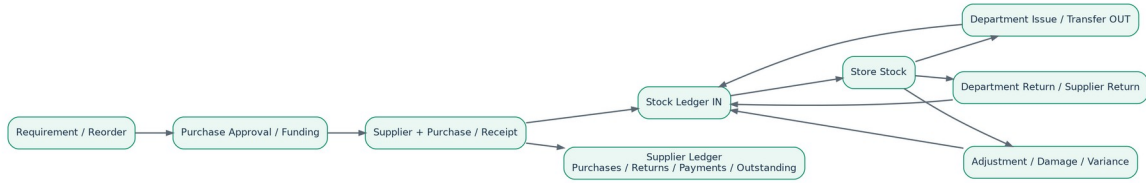

### 5. Admission

*Admission is operational, not a cash-collection portal.*

- Planned Admission / Admission Booking supports estimated charges and advance request, but payment is collected in Billing.
- Active Admission owns department, doctor, ward/room/bed, running Hospital services and discharge coordination.
- Medication Mode is SELF or HOSPITAL MANAGED and can be changed during the stay with reason/actor/time.
- At discharge there are two separate financial streams: Hospital Bill -> Billing; Pharmacy Bill -> standalone Pharmacy.
- Final discharge requires Clinical Ready + Hospital Billing Clearance + Pharmacy Clearance where Pharmacy-managed medicines exist.

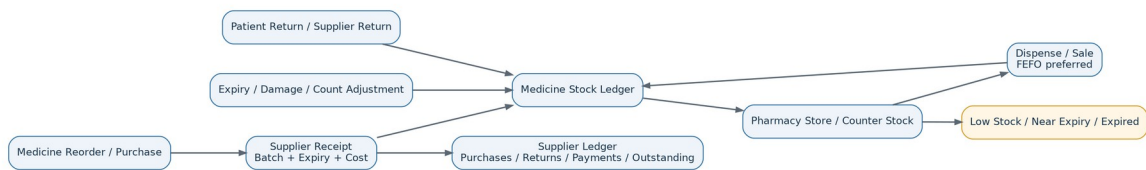

## 6. HMS Inventory Management

General inventory uses supplier and stock ledgers with controlled cash accountability.

| Module                  | Scope                                                                                           |
|-------------------------|-------------------------------------------------------------------------------------------------|
| Supplier Master         | Supplier name, contact, address, terms/status                                                   |
| Purchase / Receipt      | Requirement, approval/funding, purchase, receipt, quantity/rate/reference/payment method        |
| Stock Ledger            | Every IN/OUT/transfer/return/adjustment with running quantity                                   |
| Supplier Ledger         | Purchases, returns, payments, credits and outstanding where credit purchase is allowed          |
| Department Issue/Return | Issue stock to wards/departments and receive unused stock back                                  |
| Transfers/Adjustments   | Location-to-location movement, count variance, damage/loss with reason                          |
| Reorder/Alerts          | Low-stock/reorder monitoring                                                                    |
| Cash Control            | Petty cash/advance received, cash purchases/expenses, user Balance Sheet and Account Settlement |

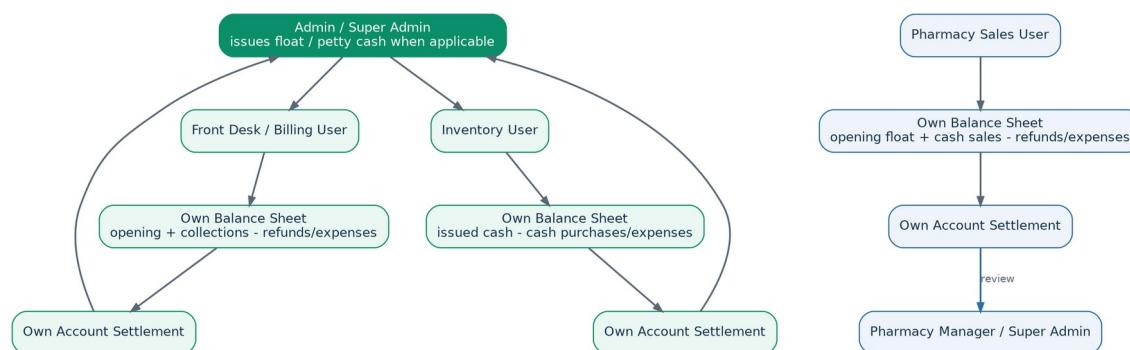

## 7. Standalone Pharmacy

Pharmacy Manager inventory includes batches, expiry, stock ledger and supplier ledger.

- Medicine Master, suppliers, purchase/receipt, batch and expiry, store/counter locations, FEFO-oriented dispensing, returns and adjustments.
- Medicine Stock Ledger and Supplier Ledger are maintained inside Pharmacy, not duplicated in HMS Inventory.
- Pharmacy Sales/Dispensing Staff own their sales/dispensing workflow and individual cash Balance Sheet/Settlement.
- Admission sends medicine requests only when HOSPITAL MANAGED mode is active.

## 8. Universal user cash accountability

*Every cash-handling user maintains their own cash position and submits their own settlement.*

**Cash-handling users include Front Desk/Billing cashiers, funded Inventory users and Pharmacy Sales/Dispensing users. Admission is excluded because Admission never receives Hospital cash.**

## 9. Patient identity and panel rule

| Patient                         | Persistence rule                                                                                                     |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Panel Patient                   | Permanent reusable patient master with panel identity/history                                                        |
| Normal/Self-Pay OPD/Appointment | Temporary visit/booking identity; invoices and transaction snapshots remain                                          |
| Normal/Self-Pay Admission       | Temporary active admission identity; discharge/invoice/receipts remain as history, but no reusable master by default |

## 10. Reporting and accountability

- Super Admin/Admin see hospital-wide reports and each Staff profile has individual Attendance, Salary, Commission and employment history reports.
- Every reporting page supports From/To date and relevant filters; PDF/Excel/Print are filtered.
- Every action is attributed to actual logged-in user: Created By, Collected By, Changed By, Approved By, Paid By, Purchased By, Issued By, Received By, Settled By, Dispensed By.
- No posted financial/payroll/stock history is silently deleted; corrections use adjustment, reversal or controlled status changes.

## 11. External pattern validation

Architecture patterns were cross-checked against mature ERP/HMS approaches: Odoo payroll uses employee contracts/work schedules and resolved work entries before payslips; ERPNext uses Purchase Receipt, Stock Entry, Stock Ledger and batch tracking; Bahmni stock management supports suppliers, batch/expiry, stock movement and healthcare pharmacy inventory. These references validate design patterns only; CHSS business rules remain authoritative.

## 12. Source-of-truth version note

**v6.3 supersedes v6.2 and earlier PDFs. The separate portal PDFs, Client Walkthrough and Formula Book in this pack use the same rules and terminology.**
