

## CH SHARIF AND SAEED HOSPITAL

# Client Functional Walkthrough

Meeting-Friendly Explanation of the Complete Hospital + Pharmacy Solution

**Use this document to explain the project from patient arrival to finance, staff payroll and stock control.**

Prepared by iSysware Software Solutions | Final Source of Truth v6.3

## 1. What the solution contains

The solution is not one generic dashboard. It is a connected operating system with role-specific portals, clear ownership of money and stock, and user-level accountability.

| System                     | Portals                                                                 |
|----------------------------|-------------------------------------------------------------------------|
| Hospital Management System | Super Admin, Admin, Front Desk/Billing, Admission, Inventory Management |
| Standalone Pharmacy        | Pharmacy Super Admin, Pharmacy Manager, Pharmacy Sales/Dispensing Staff |

## 2. How staff and users work

Every employee is created in Staff Master. Only employees who need system access get a linked Portal User. Doctors, nurses, peons and other staff can exist without logins. Each employee has one Staff Profile that can show attendance, salary, doctor commission where applicable and employment history. If a Staff Portal is added later, it will use this same profile.

## 3. 24/7 attendance and payroll

*Biometric/device punches are reviewed before payroll.*

Shifts are department-wise and may be overnight. Super Admin/Admin can correct missing/incorrect attendance with a reason. Salary rules are staff-specific. Salary and Doctor Commission are separate so the hospital can pay either one whenever required.

## 4. Patient arrival and appointments

Front Desk can book appointments or register a walk-in encounter. Panel Patients use a permanent profile; normal/self-pay patients use a temporary visit identity. Appointment advances and all Hospital patient payments are received by Front Desk/Billing.

## 5. OPD / Observation / Emergency

**Patient -> Front Desk -> Encounter -> Services -> Discount if approved -> Hospital Invoice -> Payment -> Receipt**

## 6. Admission

Admission manages the stay, not the cash. Planned admission can request an advance. Billing receives it. During the stay, Hospital services build a running Hospital bill. Medication can be SELF or HOSPITAL MANAGED and this mode can be changed with an audit trail.

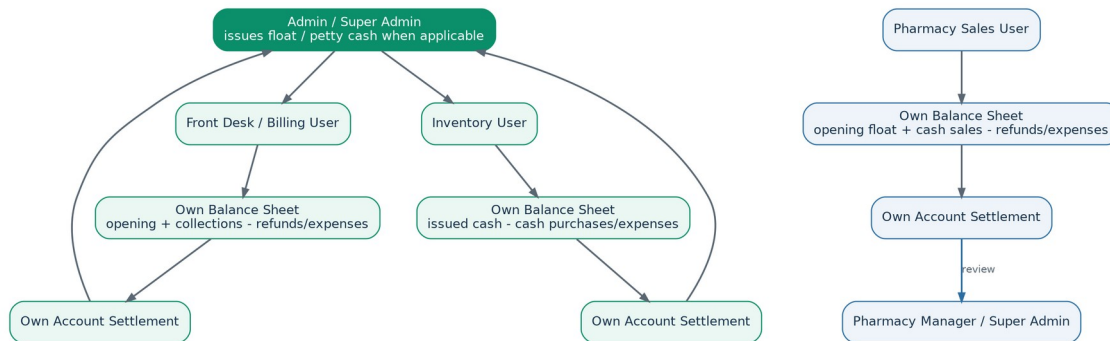

## 7. Two separate bills at discharge

| Bill          | Where it is cleared |
|---------------|---------------------|
| Hospital Bill | Front Desk/Billing  |
| Pharmacy Bill | Standalone Pharmacy |

**Discharge is released after Clinical Ready + Hospital Billing Clearance + Pharmacy Clearance where Pharmacy-managed medicine was used.**

## 8. Cash accountability

Every person who actually handles cash has an individual Balance Sheet and Account Settlement. Billing cashiers, funded Inventory users and Pharmacy Sales/Dispensing users do not share one anonymous cash account. Admission is excluded because it never collects Hospital money.

User-wise cash accountability and settlement.

## 9. Inventory

Hospital Inventory is a full stock-control module: supplier master, purchase/receipt, stock ledger, supplier ledger, department issue/return, transfers, adjustments, reorder alerts and user petty-cash settlement. Medicine inventory is kept separately inside Pharmacy.

## 10. Pharmacy

Pharmacy Manager controls medicine master, suppliers, purchases, batches, expiry, Medicine Stock Ledger, Supplier Ledger, store/counter transfers, returns, expiry/damage adjustments and low/near-expiry alerts. Sales staff dispense/sell and settle their own cash accounts.

## 11. Management reports

- Hospital-wide Dashboard and financial summaries.
- Individual Staff Attendance, Salary and Commission reports.
- Appointments, encounters, Billing collections/refunds/outstanding.
- Admission occupancy, charges, payment requests, Pharmacy status and discharge clearance.
- Inventory Stock/Supplier ledgers and cash settlements.
- Pharmacy stock/batch/expiry/supplier/sales/settlement reports.

## 12. What the client still configures

- Exact salary divisor/deduction formulas, leave/overtime/public holiday policy.
- Doctor service commission rates and Gross/Net commission basis per employee/service.
- Appointment cancellation/no-show/refund policy.
- Discount approval limits.
- Settlement cadence: shift/day/custom period.
- Panel-specific discount/claim rules as provided by the hospital.

## 13. Why the architecture is safe to build

- Each transaction has one clear owner.
- Money and stock movements are auditable.
- Hospital and Pharmacy stock are not duplicated.
- Salary and Commission are independent.
- Staff records survive even if portal access changes.
- Future Staff/Doctor Portal can reuse the same staffid and history.
