Balance Sheet & Account Settlement Guide

Front Desk, Inventory, Admin & Super Admin - Portal Roles, Daily Flow, Reconciliation and Control

Purpose: Define one consistent, auditable money-handling workflow for every HMS user who receives, refunds, spends, hands over, or reconciles money. Admission Portal remains non-cash.

Version: HMS Finance Control Guide v1.0

Scope: Main HMS portals + note for standalone Pharmacy

1. Core Concept and Portal Ownership

Balance Sheet and Account Settlement are related but different controls. The Balance Sheet is the live position of a user; Account Settlement is the controlled handover/reconciliation that closes all or part of that position.

Balance Sheet = what the user has collected / spent / refunded and what remains unsettled. Account Settlement = how that unsettled position is handed over or reconciled and then locked into history.

Portal	My Balance Sheet	My Account Settlement	All User Settlements / Oversight
Front Desk / Billing	Yes - mandatory for cash-handling users	Yes	No, unless role has finance oversight
Admission	No patient-cash sheet	No patient-cash settlement	No
Inventory Management	Yes when handling petty cash / expenses / supplier cash	Yes	No
Admin	Own sheet if personally handling money	Own settlement if applicable	Yes - view/verify authorized users
Super Admin	Own sheet if personally handling money	Own settlement if applicable	Yes - hospital-wide oversight
Standalone Pharmacy	Separate Pharmacy system balance sheet	Separate Pharmacy settlement	Pharmacy management only

Admission Portal must never collect patient cash. It may see payment status only. If a patient/guardian wants to pay, the transaction returns to Front Desk / Billing.

2. One Money Rule Across the HMS

Core money-control flow

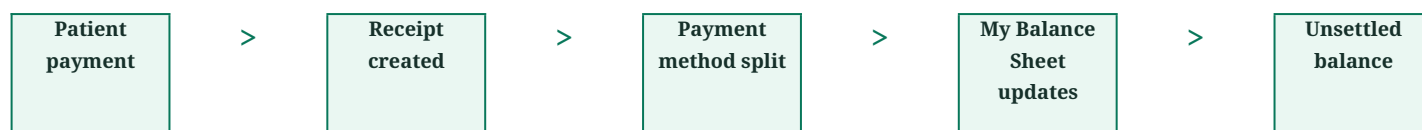

- Every human money action is attributed to the actual logged-in user.
- Cash, Card, Bank and Online are separate payment channels; non-cash must never inflate physical cash.
- Posted receipts, refunds and settlements are not silently edited; corrections use reversal/adjustment.
- Cashier settlement is different from outsourced department settlement. One clears staff custody; the other clears a provider payable.

3. Front Desk / Billing - My Balance Sheet

Front Desk is the main patient-money collection point. OPD, Observation, Emergency, appointment advances, admission advances, partial payments, final payments and patient refunds all affect the logged-in Front Desk user's balance sheet.

Front Desk collection flow

3.1 Recommended Balance Sheet Screen

Section	Fields / KPIs
Filters	Current Day, Yesterday, Custom Date, Shift, User (Admin/Super Admin view only)
Collections	Receipt No., Patient, Encounter/Admission, Type, Method, Amount, Collected By, Date/Time
Refunds / Expenses	Reference, Type, Reason, Amount, Authorized By, Processed By
Cash Summary	Opening Float, Cash Collections, Cash Received, Cash Refunds, Authorized Cash Expenses, Expected Cash
Non-Cash Summary	Card, Bank, Online totals + unreconciled references
Settlement Summary	Previously Settled, Current Unsettled, Last Settlement, Status

3.2 Cash Formula

Expected Physical Cash = Opening Float + Cash Collections + Cash Received - Cash Refunds - Authorized Cash Expenses

Card, Bank and Online totals remain separate from Expected Physical Cash. They are reconciled using their own references/batches.

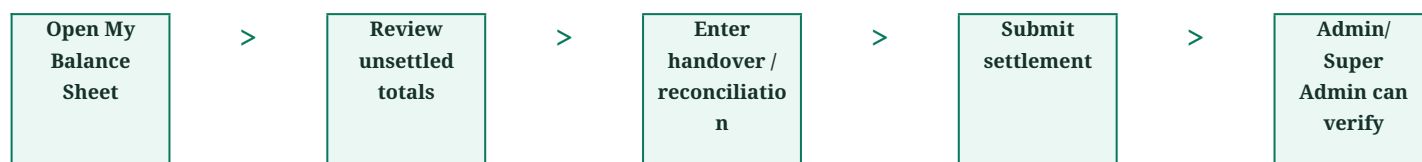

3.3 Example - Front Desk User Ali

Movement	Cash	Card	Online
OPD collections	10,000	-	-
Admission advance	20,000	-	-
Partial admission payment	5,000	-	-
Other patient payments	-	8,000	12,000
Cash refund	-2,000	-	-
Expected position	33,000	8,000	12,000

Ali should physically hand over PKR 33,000 cash. The PKR 8,000 card and PKR 12,000 online amounts are reconciled against their transaction/batch references.

4. Front Desk - My Account Settlement

End-of-shift / end-of-day settlement flow

4.1 Settlement Form

Field	Behavior
Settlement No.	Backend/system generated
User / Role	Actual logged-in user, read-only
Settlement Period	Shift/date range being settled
Expected Cash	Derived from balance sheet
Actual Cash Handed Over	Entered at handover
Cash Difference	Actual - Expected
Card / Bank / Online	Channel totals for the selected period
References	POS batch, bank deposit, transaction refs as applicable
Received / Verified By	Authorized Admin/Super Admin or designated receiver
Remarks	Required when difference, partial settlement, or adjustment exists

4.2 Settlement Statuses

Status	Meaning
OPEN / UNSETTLED	User has money/transactions not yet settled
PARTIALLY SETTLED	Only part of the eligible position has been handed over/reconciled
SETTLED	Selected period/position is fully settled
REVERSED / ADJUSTED	Posted settlement corrected through a linked control entry

Do not provide a Delete button for posted settlements. Financial correction should be a reversal/adjustment with reason, user and timestamp.

5. Cash vs Card vs Bank vs Online - How Each Settles

Method	What Balance Sheet Tracks	Settlement / Reconciliation
Cash	Physical cash collected/refunded/expenses	Actual cash handed over; difference calculated
Card	Approved card receipts	Reconcile POS batch / merchant settlement reference
Bank Transfer	Banked patient receipts	Reconcile bank reference / deposit / transaction
Online	Wallet/gateway/online transfer receipts	Reconcile gateway or bank transaction reference

A user may settle multiple channels in one settlement record if the UI clearly itemizes each method. The settlement total must not imply that non-cash was physically handed over as cash.

5.1 Partial Settlement Example

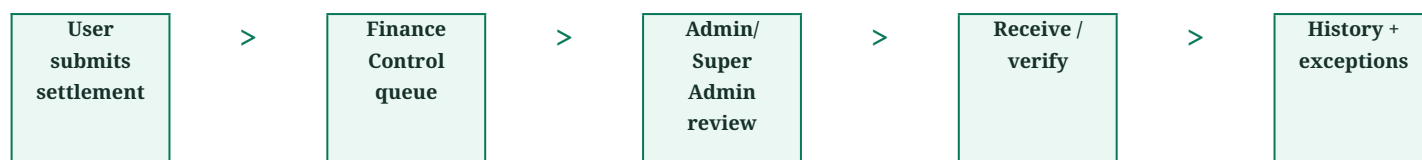

Item	Amount
Expected Cash	33,000
Cash Handed Over Now	30,000
Remaining Unsettled Cash	3,000
Card reconciled	8,000
Online reconciled	12,000

Result: cash is PARTIALLY_SETTLED with PKR 3,000 carried as unsettled; Card and Online may already be fully reconciled.

6. Admin / Super Admin - Finance Control

Admin and Super Admin need an oversight view of all authorized cash-handling users, not just their own sheet. Their normal hospital-management capability is the same, subject to protected Super Admin safeguards elsewhere in the HMS.

Oversight workflow

6.1 User Balance Sheets

Filter / KPI	Purpose
Date / Shift	Review any settlement period
Portal	Front Desk, Inventory, Admin/Super Admin own handling if any
User / Role	Trace custody by actual person
Expected Cash	System-calculated physical cash
Settled Cash	Already handed over
Unsettled Cash	Still in user custody
Card / Bank / Online	Channel totals and reconciliation state
Difference	Over/short requiring explanation

6.2 Account Settlements - Central Register

Column	Expected Content
Settlement No.	Unique reference
Date / Period	Settlement date and covered period
Portal	Source portal
User	Cash-handling user
Cash / Card / Bank / Online	Separate amounts
Total	Total settlement value
Difference	Cash over/short
Status	Partial / Settled / Reversed
Received / Verified By	Actual receiving authority
Action	View, Print, Export, Reverse/Adjust if authorized

6.3 Admin/Super Admin KPIs

- Total cash collected today
- Total card, bank and online collections
- Total refunds and authorized cash expenses
- Expected cash vs settled cash
- Total unsettled cash
- Users pending settlement
- Settlement differences / exceptions
- Total settlements completed today

7. Inventory Management - Balance Sheet & Settlement

Inventory should have My Balance Sheet / My Account Settlement only where the user handles real money such as petty cash, approved expense funds, supplier cash payments or cash received from another accountable user.

Inventory Money Event	Balance Sheet Effect
Petty cash / fund received	Cash received
Authorized operating expense	Cash expense
Supplier cash payment	Cash outflow
Purchase return cash received	Cash received / reversal as applicable
Online/bank supplier payment	Non-cash transaction; does not reduce physical cash unless funded through cash deposit

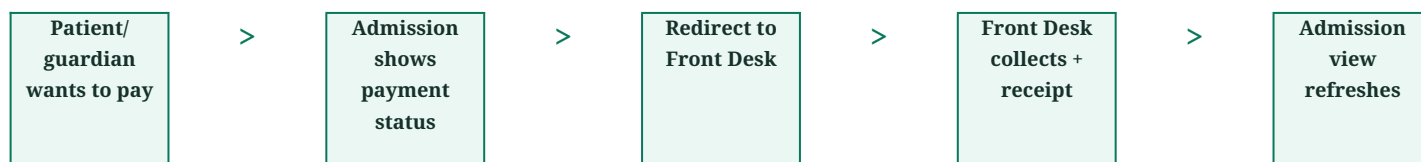

Inventory Balance Sheet is not a patient-revenue report. Patient payments remain in Front Desk/Billing.

8. Admission Portal - No Patient Cash Settlement

Admission Portal manages the inpatient stay, services, fulfillment requests, transfers and doctor-authorized clinical discharge. It does not receive patient money.

Admission Portal Can See	Admission Portal Must Not Do
Total charges / running financial status	Collect cash
Patient paid / patient outstanding	Issue patient payment receipts
Panel receivable status	Settle cashier account
Payment status from Front Desk	Perform final financial clearance

Payment during inpatient stay

9. Admin / Super Admin Own Balance Sheet

Admin/Super Admin should only have a personal Balance Sheet when they themselves perform a money-handling action. Oversight access does not automatically make them the collector.

- If Admin personally receives cash, the receipt is attributed to that Admin and appears in that Admin's own sheet.
- If Admin only verifies another user's settlement, the original collection remains attributed to the original cashier.
- No hardcoded fallback actor names are permitted.

10. Standalone Pharmacy Note

Standalone Pharmacy is a separate connected project. Retail/walk-in Pharmacy Sales users may have their own Balance Sheet and Account Settlement inside Pharmacy. Inpatient HMS Pharmacy charges are collected centrally by Front Desk/Billing and therefore stay in the HMS Front Desk money-control flow.

11. Cashier Settlement vs Department Settlement

These are two different ledgers and must never be merged.

Cashier Account Settlement	Outsourced Department Settlement
Clears money custody of a user	Clears payable due to an outsourced/settlement-enabled department
Example: Front Desk Ali hands hospital cash	Example: Hospital pays outsourced Lab its eligible realized amount
Based on user collections / refunds / expenses	Based on department-attributable realized collections
Can happen daily / per shift	Can happen later by department and period
Does not create revenue	Does not create second revenue event

Example: Ali collects PKR 5,000 for an outsourced Lab service. Ali settlement clears Ali's cash custody. Later, Department Settlement clears the hospital's payable to Lab. These are not the same event.

12. Controls and Non-Negotiable Rules

1. Every human money transaction uses the actual authenticated user.
2. Cash, Card, Bank and Online remain separately identifiable.
3. No posted settlement is silently edited or deleted.
4. Partial settlements preserve remaining unsettled balance.
5. Receipts and refunds remain linked to their original references.
6. Admission Portal never becomes a patient cash counter.
7. Admin/Super Admin oversight does not reassign ownership of collections.
8. Cashier settlement and department settlement remain separate.
9. Exports/prints show actual Generated By user and timestamp.
10. Historical settlement records remain immutable except through controlled reversal/adjustment.

13. Recommended Navigation and Screens

Portal	Navigation
Front Desk / Billing	Cash Control > My Balance Sheet; My Account Settlement
Inventory	Cash Control > My Balance Sheet; My Account Settlement
Admin	Finance Control > User Balance Sheets; Account Settlements; Pending Settlements; Settlement History; Settlement Differences
Super Admin	Same finance-control views with hospital-wide scope
Admission	No Balance Sheet / Settlement menu; payment status only

13.1 Balance Sheet Buttons

- Filter
- Print Balance Sheet
- View Receipt
- Settle Account
- View Previous Settlements

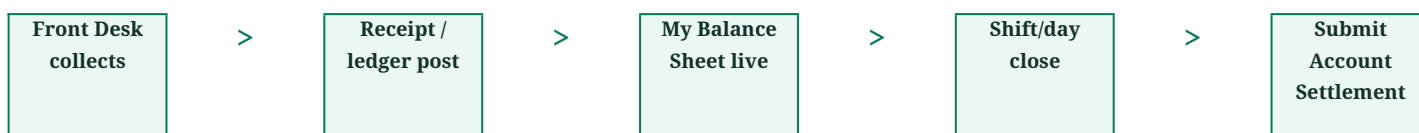

13.2 Settlement Register Buttons

- View Settlement
- Print
- PDF
- Excel
- Reverse / Adjust (authorized only)

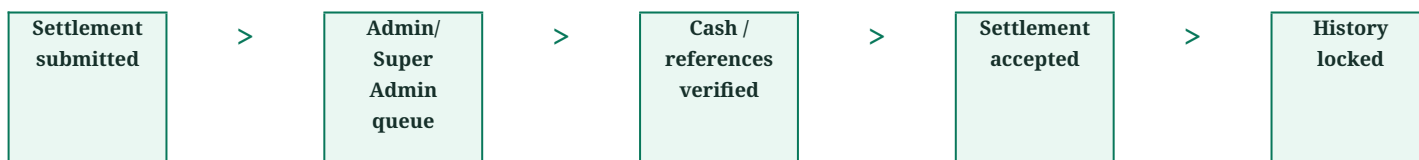

Avoid a Delete button on financial settlement history.

14. Complete End-to-End Flow

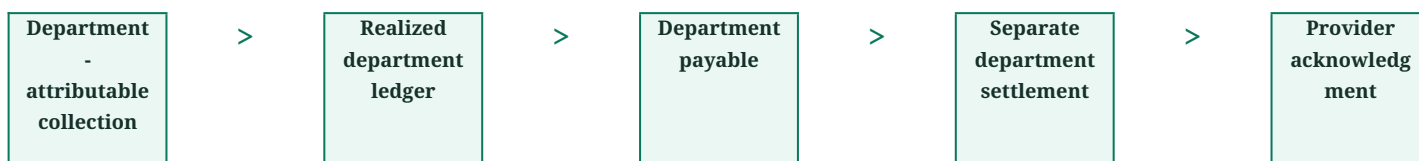

Phase A - User custody

Phase B - Management control

Phase C - Outsourced provider settlement

The three phases are linked by references but remain separate accounting events. A patient payment is collected once; subsequent settlements only clear custody/payables.

15. Worked Hospital Example

Event	Who Acts	Result
OPD patient pays PKR 2,000 cash	Front Desk Ali	Ali cash +2,000
Admission patient pays PKR 20,000 advance cash	Front Desk Ali	Ali cash +20,000; patient credit recorded
Patient pays PKR 8,000 by card	Front Desk Ali	Card +8,000; physical cash unchanged
Cash refund PKR 1,000	Front Desk Ali	Ali expected cash -1,000
End-of-day settlement	Ali + receiver	Expected cash handed over; card batch reconciled
Lab share later becomes payable	Billing/Admin	Handled in separate Department Settlement

16. Implementation / QA Checklist

Check	Expected Result
Cash receipt posted	User Balance Sheet increases cash only for Cash method
Card/Online receipt posted	Non-cash total increases; physical cash unchanged
Refund posted	Correct channel and user position reduced
Partial settlement	Remaining unsettled amount preserved
Full settlement	Selected period shows Settled
Difference entered	Reason/remarks required and visible to oversight
Admin verifies settlement	Original cashier attribution remains unchanged
Attempt to delete settlement	Not allowed; use reversal/adjustment
Admission user attempts payment	Blocked / redirected to Front Desk
Inventory petty cash expense	Inventory sheet updated, not patient revenue
Department settlement	Independent from cashier settlement
Print/export	Hospital Profile + filters + actual logged-in Generated By

Final business flow: Collect -> Track -> Reconcile/Handover -> Verify -> Lock History. Money ownership always follows the actual user who handled the transaction.
